SAKOR Technologies, Inc. Launches New Website

Updated site showcases dynamometer testing system products and services

SAKOR Technologies, Inc., a leader in engine and powertrain testing, announces the launch of its totally redesigned and updated website. The new site, located at www.sakor.com, contains the complete range of SAKOR's products and services, along with examples of successful projects completed in the company's key areas of expertise. Also available are a host of useful links to technical information, access to brochures and flyers, and contact information to reach one of SAKOR's expert application specialists.

The new website provides a wealth of detailed information on SAKOR's test systems for engines and powertrains, electric machines, hybrid electric vehicles, high voltage battery simulators, and alternative energy systems, as well as those for individual components.

Handy and useful links are provided to numerous sites providing related technical information, including help with calculating physical data. Illustrated project profiles provide an up-close look at successful systems on the ground, so prospective customers can see applications first hand.

SAKOR is a recognized world leader in the development of reliable and cost-effective automated dynamometer-based test systems. For more than 24 years, SAKOR has been providing quality dynamometers, test cell controls, and ancillary equipment for performance, durability, and quality control testing in a wide variety of applications. SAKOR serves a variety of markets, including automotive, hybrid/electric vehicle, military, and aerospace. Other key industries served include marine, heavy equipment, electric motor generator, performance racing, and consumer appliance.

New website features are being added, including a User's Group designed to be a resource for those seeking answers to dynamometer testing questions and solutions to problems. The User's Group is expected to launch in the spring of 2012 and will be aimed existing SAKOR customers as well as any others who may have questions. Contact SAKOR at info@sakor.com to be notified when the User Group goes live.

"I am excited to introduce SAKOR's new website, which offers detailed and helpful technical information to help engineers understand dynamometer testing systems and select the best one for their particular application," said Randal Beattie, President of Okemos, Michigan-based SAKOR Technologies, Inc.
